Ideation Phase
Brainstorm & Idea Prioritization Template

Date	06 October 2026
Team ID	6aba1145538da4003d631644
Project Name	Auto Ticket Classification using Flow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to collaborate
2-8 people recommended

Before you collaborate
A little bit of preparation goes a long way with this session. Here's what you need to do to get going. **(10 minutes)**

A. Team gathering
Team members (IT helpdesk project team) gathered online/offline; relevant information on helpdesk incident categories shared as pre-work.

B. Set the goal
Automate classification of incoming school IT helpdesk tickets using ServiceNow Flow Designer.

C. Learn the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

1. Define your problem statement (5 minutes)

PROBLEM

How might we automatically classify and categorize incoming IT helpdesk incidents (Wi-Fi, projector, password, slow computer) by analyzing the short description and description, so IT staff no longer have to review each ticket manually?

Key rules of brainstorming
To run a smooth and productive session
Stay in topic. | Encourage wild ideas.
Defer judgment. | Listen to others.
Go for volume. | If possible, be visual.

Project context: The school IT helpdesk receives many incident requests daily from students and teachers (Wi-Fi issues, projector failures, password problems, slow computers). IT staff currently review each request and assign a category by hand, which is time-consuming and inefficient. This project automates ticket classification with ServiceNow Flow Designer by analyzing keywords in the incident's Short Description and Description fields.

Step-2: Brainstorm, Idea Listing and Grouping

2. Brainstorm (10 minutes) - Ideas from each team member that address the problem statement.

Team Member 1

- Trigger Flow when a new incident is created
- Match keywords in Short Description
- Also scan the Description field

Team Member 2

- Wi-Fi / internet / network -> Network
- Projector / display / screen -> Hardware
- Password / login / locked -> Account Access

Team Member 3

- Slow / hang / freeze -> Performance
- Default category 'General' if no match
- Keyword table (editable by admin)

Team Member 4

- Auto-assign to the right support group
- Set priority from keywords (e.g. exam / urgent)
- Notify caller after classification

Team Member 5

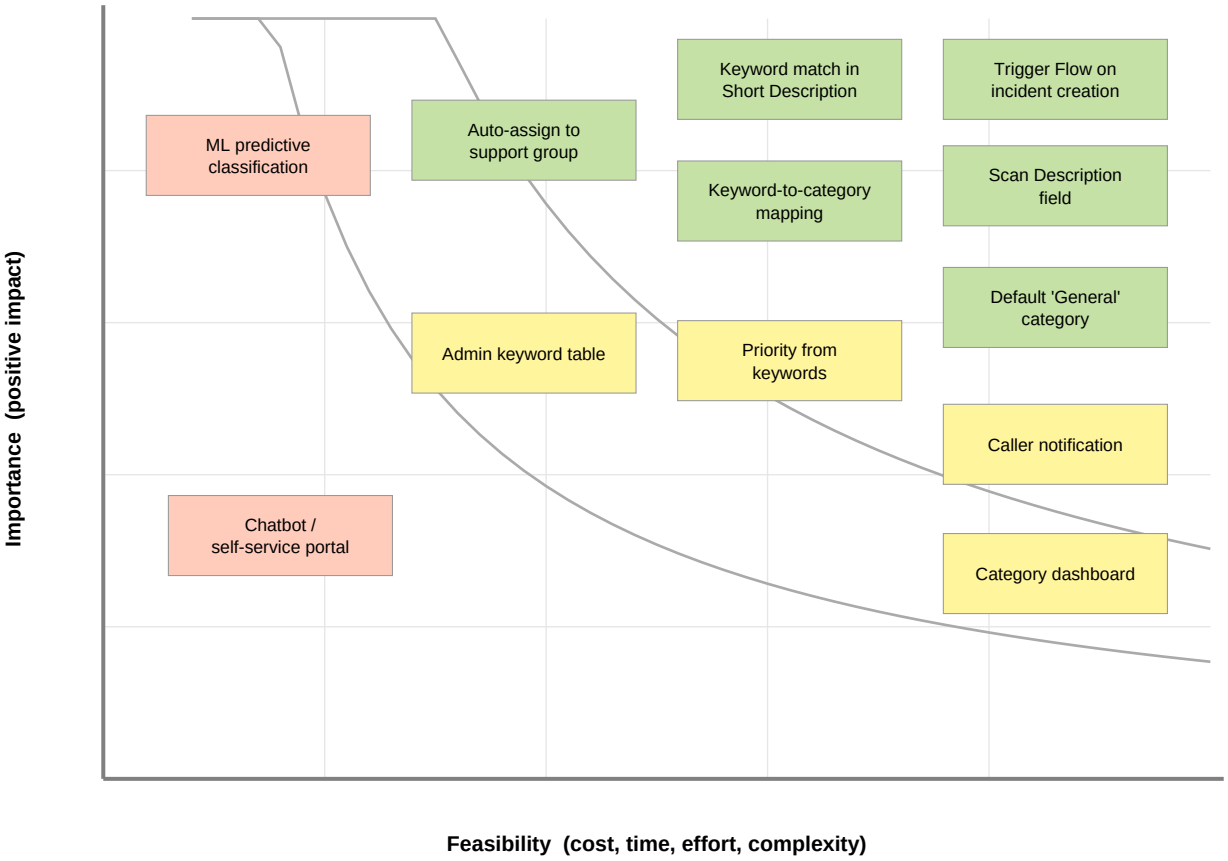
- Dashboard of tickets per category
- ML-based predictive classification
- Chatbot / self-service ticket portal

3. Group ideas (20 minutes) - Similar ideas clustered and given a sentence-like label.

Trigger & keyword detection	Keyword-to-category mapping	Routing, priority & communication	Future enhancements
Trigger Flow when a new incident is created	Wi-Fi / internet / network -> Network	Auto-assign to the right support group	Dashboard of tickets per category
Match keywords in Short Description	Projector / display / screen -> Hardware	Set priority from keywords (e.g. exam / urgent)	ML-based predictive classification
Also scan the Description field	Password / login / locked -> Account Access	Notify caller after classification	Chatbot / self-service ticket portal
Keyword table (editable by admin)	Slow / hang / freeze -> Performance		
	Default category 'General' if no match		

Step-3: Idea Prioritization

4. Prioritize (20 minutes) - Ideas placed on the grid by importance and feasibility. Green = do first (high importance, high feasibility), yellow = do next, red = future scope.



Outcome: The first release will build the Flow Designer flow that triggers on incident creation, matches keywords in the Short Description and Description, sets the category (Network, Hardware, Account Access, Performance, or General), and assigns the ticket to the right support group.
