Project Design Phase
Problem – Solution Fit Template

Date	06 October 2026
Team ID	6aba1145538da4003d631644
Project Name	Auto Ticket Classification using Flow
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Project: The school IT helpdesk receives many incident requests every day from students and teachers (Wi-Fi issues, projector failures, password problems, slow computers). IT staff review each request and assign a category by hand, which is slow and inefficient. This project automates ticket classification using ServiceNow Flow Designer by analyzing keywords in the incident's short description and description fields.

Template:

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Who is your customer?

School students and teachers who report IT incidents (Wi-Fi, projector, password, slow computer).
School IT helpdesk staff who receive, review and categorize every ticket.

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent customers from taking action?

Small IT team handling many daily requests.
Users describe problems in free text with inconsistent wording.
Limited school budget for new paid tools.
Solution must work within the existing ServiceNow instance.

5. AVAILABLE SOLUTIONS — AS

Which solutions are available to customers today?

IT staff manually read each ticket and assign a category; users pick a category themselves, phone or email the IT desk.
Pros: human judgement.
Cons: slow, inconsistent, wrong categories, heavy workload.

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs (or problems) do you address?

Get Wi-Fi, projector, password and slow-computer issues resolved quickly.
Make sure every ticket gets the right category and reaches the right team.
Remove the time-consuming manual review of each incident.

9. PROBLEM ROOT CAUSE — RC

What is the real reason that this problem exists?

Every incident is categorized by hand.
Short description and description are free text, and there is no automatic rule to read them.
Ticket volume keeps growing while staff numbers stay the same.

7. BEHAVIOUR — BE

What does your customer do to address the problem?

Users submit an incident with a short description and description, or call/visit the IT desk if urgent.
IT staff read each ticket, choose the category, assign the group, and answer follow-ups about delays.

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

What triggers customers to act?

Projector or Wi-Fi fails during a class.
Account locked or password forgotten before a lesson or exam.
Computer becomes too slow to work on.
Growing queue of unsorted tickets.

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face a problem?

Before: frustrated, stressed, unsure when help will come; IT staff overwhelmed.
After: relieved and confident that tickets are routed correctly and quickly; staff focus on fixing issues.

10. YOUR SOLUTION — SL

Solution that fits customer limitations and behaviour

Automate ticket classification with **ServiceNow Flow Designer**.

A flow triggers when a new incident is created, analyzes keywords in the **short description** and **description**, sets the category (Network, Hardware, Account Access, Performance, or General) and assigns the ticket to the right group.

No manual triage is needed, so tickets are sorted in seconds and IT staff can focus on resolving them.

8.1 ONLINE — CH

What online actions do customers take?

Submit incidents through the ServiceNow Service Portal / incident form.
Receive email notification when the ticket is classified.
IT staff work from the ServiceNow incident list.

8.2 OFFLINE

What offline actions do customers take?

Walk to the IT desk, call IT staff, or report problems verbally in class.
Staff log these in ServiceNow so the flow classifies them the same way.

Extract online & offline CH of BE
