Project Design Phase
Proposed Solution Template

Date	06 October 2026
Team ID	6aba1145538da4003d631644
Project Name	Auto Ticket Classification using Flow
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The school IT helpdesk receives many incident requests every day from students and teachers, such as Wi-Fi issues, projector failures, password problems and slow computers. IT staff currently review each request and assign a category by hand, which is time-consuming and inefficient. Tickets can wait in an unsorted queue, delaying the fix for issues that disrupt classes.
2.	Idea / Solution description	Automate ticket classification using **ServiceNow Flow Designer**. A flow starts when a new incident is created and analyzes the keywords in the **Short Description** and **Description** fields. It sets the category (Network, Hardware, Account Access, Performance, or General if nothing matches), assigns the incident to the right support group, and notifies the caller and IT staff. Keywords are kept in a table so they can be updated without changing the flow.
3.	Novelty / Uniqueness	Classification is built entirely with ServiceNow's low-code Flow Designer, so it needs no extra software, servers or custom application. It checks both the short description and the description, not just the title. An editable keyword table lets school admins add or change rules themselves. It is designed around the school's common issues (Wi-Fi, projector, password, slow computer).
4.	Social Impact / Customer Satisfaction	Students and teachers get their issues routed and handled sooner, so less class time is lost. Tickets are categorized consistently, with fewer wrong categories. IT staff are relieved of repetitive sorting and can spend their time fixing problems. Callers are notified, so they know their request is being handled.
5.	Business Model (Revenue Model)	This is an internal tool for a school, not a product sold for profit, so there is no direct revenue. The value comes from savings in IT staff time and faster issue resolution. It runs on the school's existing ServiceNow platform, so no new infrastructure is needed. If offered to other schools or institutions, it could be packaged as a ServiceNow configuration (update set) with a one-time setup or support fee.
6.	Scalability of the Solution	The solution runs on the ServiceNow cloud platform and processes each new incident automatically, so more tickets do not need more manual work. New categories or keywords are added in the keyword table without changing the flow. It can be reused in other schools or departments on ServiceNow, and extended later with machine learning (Predictive Intelligence), a chatbot or chat tool integrations.
